

Introducing **D. B. Safety Solution's Inc.** Implementing Industrial Safety Systems

Introducing **D. B. Safety Solutions Inc.'s** new and exciting training experience for managers, supervisors, safety personnel and workers.

This highly interactive learning platform has learners break into teams to manage an industry enterprise for profit, while at the same time, implement a health safety system.

Players will learn every element of safety systems in a fun, interactive way! Each team starts with a customer contract, workforce units and a stakeholder loan (*Industrial Dollar\$*); but be careful, stakeholders want a tidy profit in the end.

Teams decide the amount of effort and financial resources to deploy into each system element. Don't forget, every decision you make may have a positive or negative affect on the workers morale, at risk behaviours and productivity.

Your teams will deliberate management commitment strategies, hazard assessment, setting targets and objectives, implementation of plans, documentation, contractor management, measuring and monitoring activities, return to work programs, incident management, statistics, audits, management review processes and much more.

In the end, each team will try and make as much profit as they can!

After all, industry is all about making money!
